

EPHEMERIS

The Creation of the World,	5646	
The Death of our Saviour,	1684	
The Conquest of this Nation,	631	
The Restoration of K. Ch. II.	37	
The Last great Plague,	32	} Yea.
The Burning of London	34	
The Last great Frost	13	
The Death of King Charles II.	12	
The Abdication of K. James II.	8	

From the Sun's Ingress into the Equinoctial Sign *Aries*, and the other Cardinal Points; with an account of the Eclipses, Conjunctions of the Planets, and other Configurations of the Cœlestial Bodies.

By *John Tanner* Student in Physick and Astrology.
The one and Fortieth Impression.

Astra in voluntatem hominis, & liberum arbitrium indirectè & per accidens agunt; dum directè temperamentum significant & disponunt, sensusque in consensu trahunt.

London, Printed by W. Horton for the Company
of Stationers, 1697.

The residue of the Table of the Moon's Southing, every day of the other six months, serving for the purpose aforesaid; also to find the hour of the Night, by the shadow of the Moon, upon the Sun-Dial: Note, that M stands for morning, A for Afternoon.

Jan.

All Twilight.

January hath xxxi days.

Scarcely recover'd of the Frights last Year,
That bid me Shun the Company of Men,
Who unto me like Savages appear,
Scatter'd my thoughts, and Ragged made my Pen,
Afraid I was to Bleed and paper Stain,
Till zeal and anger wox'd me up again.

January 1697.

Month Days.

Old frigid Saturn his rays doth despence,
With cold and feather'd clouds accosts the Sun,
And lets us feel his chilling influence,
Too oft repeated e're the month is done:
Assisted by the nimble Mercury,
Whose aid cause piercing winds to cleanse the Skye.

February hath xxviii Days.

A zealous anger 'gainst the worst of Crimes,
 Bid me rouse up and openly despise,
 Such villanies scarce Known in the worst of times;
 I want a Satyr's Strain it to descry,
 Niter so sharp, and Gall to dip my pen,
 That cannot be too bitter 'gainst such men.

February 1697.

The milder Stars the winters cold renits,
The greater fortune on the Sun doth smile,
Sometimes clear air, and clouds again by Fits,
Fair Sun shins often doth our hopes beguile.
Hermes Slides backward on the slippery Fishes
And joyns with Mars to frustrate our well wishes.

March 1697

Month days

Cold clouds and moisture doth the month begin,
 Saturn, and the lowest two moisten the air,
 The two Infortunes clear the air again (fair :
 With Frost, cold winds, and Sharp, but somewhat
 The Sun and Mars conjoynd doth warm the Sky,
 And we do hope 'twill make the weather dry.

May 1697.

The King of Stars joyned with Mercury,
In a foul hole of Heaven and Turbulent;
For some small time cause a dislemper'd Sky;
Their influences sure will soon be spent.
Most of the month each Planet's friendly ray,
Bespeaks a pleasant and a fruitful May.

Great William and as good, who did extend
Mercy to Traitors of the deepest dye,
Expecting (though in vain) their lives to mend.
Send them to Lewis their deeds to gratifie,
With pining hunger, starving nakedness;
Depriv'd of Newgate, Tyburn's happiness.

June 1697.

Month Days.

The two Infortune's amicable Rays,
The Air inflames with Heat, troubles the Sky,
But this seems not to last for many days:
Venus doth backward move, and doth apply
Her moisture to the Heat, and raiseth showers,
Whilst Jove and th' rest do shew their thund'ring powers.

What is't fond fools that you expect from France?
Or what good from a Tyrant Popish King?
Think of the Hugonots who did advance,
His cause in Cradle; to the Throne did bring,
Who suckt his Nurses blood; and for their pains,
Dragooning Tortures, Banishment, or Chains.

July 1697.

Month Days.

We hope a Harvest good rewards the pains
Of careful Husbandmen ; whose toil and care
Brings scarce into his Barns the wish'd for Gains.
Old Saturn frowns and bids him to beware :
His influence doth seem to dark the Skies,
And draw some Tears from weeping Swithin's Eye

August 1697.

Month Days.

Cool winds begins the month for a few days,
The Sun and Jove we hope will not offend
The Harvest man, who for good weather prays.
Mar's storms do not last long, but towards the end,
He Saturn doth oppose with's fiery beams,
Expect no weather kind from such extrems.

September hath xxx days.

You now win gold and wear it; 'Tis not so,
 If you submit unto a Tyrant's Reign,
 What e're you'd call your own, you must let go,
 If he commands, you must submit, on pain
 Of being Dragoon'd, who've power to rob or kill,
 Ask not the Reason, 'tis the Tyrant's will.

September 1697.

Month Days.

Sexuiles and loving Trines the month commence,
 bleſſeth the Seeds-man, and the latter Spring:
 We hope for good from their ſweet influence,
 But the Superiours other tidings bring,
 A Treigrand-Aſpect, what the Effects will be,
 Is hard to ſay: till time doth let you ſee.

*If Holy Church, or the unholy Tribe,
Of cheating Priests, your wealth, your all command :
None can resist without a Thumping Bribe,
Damnation 'tis their Edicts to withstand ;
Of Heaven and Hell they can dispose; Hard fate!
Where Tyranny bears sway in Church and State.*

October 1697.

Month Days.

At first the weather well befits the Season.
 After the middle there's variety
 Of Starry Applications, we have reason
 Of changing weather, and a cloudy sky,
 And dripping ☉ expect : Earth vails Moons light,
 But Saturn's Clouds, perhaps prevent our sight

Conjunctions and other Observations Aspects & Weather.

1	Day 10 h. 48. minutes.	•	D Apogæon.
2			Subtile to the sea-

November hath xxx days.

And now dear Country men, murmur no more,
At what the gracious hand of God hath wrought;
For thankful men, more mercies are in store,
Of Corah's fault beware: As you are taught
In holy writ; mercies abus'd do cry
To Heaven for vengeance, and that speedily.

[illegible]

November 1697.

Month Days.

Welcome this thrice Auspicious November,
Where twice deliver'd from Rome's Tyranny,
Here our Great William first drew breath remember,
And here proclaim'd poor England's Jubilee,
Who flights deliverance from damn'd Popish Plots,
He's a vile slave, nay more the worst of Sots.

Lunations & other Observations! Aspects. & Weather

December hath xxxi days

If Life, Estate and Liberty you own
 To be a Mercy, then your Laws defend,
 Popery from Church, and Tyrant from the Throne
 Exclude; hear not, whatever they pretend,
 If by their wiles, your reason be deprav'd,
 By forreign force you soon shall be enslav'd.

December 1697.

Month Days.

Here ends the old year, soon the new begins,
The weather mild, we hope the times are so,
Let every one strive to forsake their sins,
Which is our greatest and our deadly foe:
Fear God, honour the King, our Laws defend,
Then hope to see our Troubles at AN END.

LXXXII

Mary 2	1682	1688	Feb.	13	5	10	3	Dec.	28	Westminster.
William 3	1693	1695								Whom God preserve.

Base Murtherers Slaves from Court be gon,

Against Dissension Councils from the Throne.

Just Execution of our wholesome Law,

Makes the good love, and bad Men stand in Awe;

No need of Russian Guards, nor Priest-croffe Army,

When the Prince is lodged in the Peoples Hearts.

'Tis this all good men wish for: for this I'll pray.

And I despair, or see the happy day.

By the help of this Table, and the ☾'s Southing, you may find the time of High Water in any of the Ports ſpecified in this Table, by adding the Hours and Minutes againſt the Port, to the Hours and Minutes of the ☾'s Southing, the Aggregate or Sum is the Hour and Minute of the time of High Water at that Port, ſubſtracting 12, if your number exceed it. Having ſo often explained the Uſe of this Table, I hope it needs no farther Explanation.

When the ☾ ſhines ſo bright as to caſt a Shadow on the Sun-Dial, ſee where the Shadow falls; count how many Hours and Minutes it wants of 12, and ſubſtract that from the time of her Southing that Night, and the remainder is the hour of the Night. If the ſhadow be upon any of the Hours paſt 12, add it to the time of the ☾'s Southing, and that is the Hour of the Night, ſubſtracting 12, if the number exceed 12. If the Shadow be on the Line of 12, the Hour and Minutes of the Southing is the time of the Night.

I have ſo often explained each Page and Column of the Almanack, that I need not do it here again.

Astrological Observations

For the Year, 1697.

AS once the dumb, that never yet had spoke,
 His Father's Throat cut Danger, did provoke
 His Tongue-tied Strings to crack, he to descry,
 And to prevent the horrid Villany.
 Even so my tired Muse, by Age out-wore,
 Threw by her Pen, resolv'd to write no more:
 Untill alarm'd by a worse Crime,
 Than ever yet appeared in our Clime
 Father of Kingdoms three, who broke our Chains,
 Europe redeemed by his Care and Pains,
 From Infidels and Turkish Slavery,
 And from (what's far more worse) French Tyranny.
 This Hero, this most illustrious Prince,
 Whose blows are th' Arguments that do convince
 His most odious Foes to look on's Face,
 That dare not to appear: But oh Disgrace
 For ever to most Christian I should choose
 Assassinating, murderous Villanies.
 'Twas this my sleeping Genius did awake,
 'Twas this enforced this Task to undertake.
 But oh how vast the Story for so small,
 Offici'd was in reformed Inward
 Rome blush for Shams, and let thy eldest Son,
 His Turkish Face hide, who Tarkis barb out-dons
 And let mad Malecontents, Self-Murderers too,
 That bite their King and Country to out-do,
 Be cloth'd in sack-cloth, in Dust and Ashes ly,
 Tell God and th' King pardon this Villany.
 Let English Subjects humbly obey,
 Our King, and for his Safety ever pray;
 And be who'll not accept this Treachery
 Let Heavens Anathema upon him be

Astrological Observations, 1697.

220. Of the Winter Quarter.

IT comm'nceeth with the Sun's Entrance into the Tropick of Capricorn, and makes our shortest Day, the Sun being then at the furthest Distance from us. It happeneth this Year on Tuesday the 1th of December, at 33 Minutes, and 13 Seconds after 6. at Night: At which Time, the Face of the Heavens presenteth it self thus,

The { Mid-heaven 9 Degrees, 2 Minutes }
 { Ascendant 2 Degrees, 40 Minutes }

All the Planets are under the Earth, and all crowded into the fourth, fifth, and sixth Houses. Jupiter and Mars are in a Quartile Aspect at the Ingress, *significat quod erant multi rebelles, interfectiones, detestatio & luctus: Et maxime hoc totum erit in paritate, scilicet Haly, there shall be Rebelions, Slaughters, Robberies, and mostly a Tied under a Colour of Religion. Let them at the Helm look to it warily, lest another Plot disturb their Quiet and Safety: And let the Plotters beware, they come not to Tourn, to justify their Villany, and to beg Succels for their Brethren they have left behind, to accomplish that which themselves have failed in.* The next is a Conjunction of Saturn and Mars in Capricorn, *Haly saith, fructus quilibet altera fraudes, & Decipiones, & erunt inter homines percussiones & vulnera, &c. Men will be liable to deceive one another, there will be many Frauds, Treacheries, and Rebelions: These will happen Loss and Damage to some Prince or great Man, from a People subject to the Division of the Sign in which the Conjunction happeneth. And if we may adventure to give Judgment of the House wherein the Conjunction happens, it signifieth much Mischief and Damage to all sorts of Servants, and such as are in a Servile Condition, much Detriment and Damage to small Cattle, a Rot or Minerain ravaging amongst them, even to the Destruction of whole Flocks. Conjunction in Signis Tenebris significat celum & nivem, & signis multitudinem. Infirmis, Frost, Snow, and Extremity of Cold. It hath sometimes, and in some Parts of the World, been attended with Earth quakes, Comets, Inundations, Famine and epidemical Disorders, and pestilential: Disloyal and injurious Actions, betraying of Towns, Castles, and Armies;*

Astrological Observations, 1697.

Armies; and some rewarded for such their villanous Dealings. *Iste Aspectus est quidem sua natura frigidus, propter eorum distantiam, a se invicem, & a Terrâ; ideoque non semper cum violentiâ operentur, sed placidam & temperatam aerem reddunt: Et nives atq; gelu præsertim in Signis Hyemalibus procreant.* The Aspect is indeed cold in its own Nature, by reason of their Distance one from another and from the Earth; therefore they do not always operate with Violence, sometimes a temperate and pleasant Season is the Effect. But they cause Frost and Snow in the Winter Signs, and Seasons especially; from whence we may rationally expect very cold and winterly Weather this Quarter. The same Author goes on, *Orbis luminis harum planetarum operatus ad gradus decem secundum Veteres Arabes: Unde triginta dies aut quadraginta dierum spacium sibi vindicant eorum Aspectus.* *Sec.* the Orbs of these Planets extend to 10. Degrees according to the ancient Arabians, so that their Aspects are in force, thirty or forty Days. So that whatever Aspects or Configurations of the Planets intervene for some considerable time, the Force of the configuration of the Superiors have an Influence over them, and doth acuate the Evil, or doth attenuate the more benign Influences. And the more considerable and conspicuous will the Effects of this Conjunction be, because Jupiter from an Equinoctial Sign beholds them both by a quartile Aspect. For the three Superiors are more violent and hurtful, as they are slow in Motion, and sometimes retrograde, not soon separated or disjoyned? so that their united Force is the stronger, and their Influences oftner repeated, and more forcibly imprinted on the Air. I have the longer insisted on this Quarter, in which are the most considerable Aspects, and shall contract in the others.

Of the Spring Quarter.

THIS Quarter beginneth, when the Sun, that glorious Lamp of Heaven, toucheth the first Scruple of the Equinoctial Sign Aries, and maketh the Days and Nights of equal Length; it hapneth this Year on Tuesday the 9th. of March, at 8. Minutes past 8. at Night.

Astrological Observations, 1697.

All the Planets are under the Earth, except *Venus*, descending in the Seventh upon the Sun, and *Jupiter* upon the Ascendant just rising. The Planets behold each other with peaceable and benign Rays, which makes hope for a pleasant Spring after a severe Winter. The Sun and *Mars* are in Conjunction on the 20th of this Month, and continue near each other to the End. Their Conjunction hath been noted for influencing Strifes and Slaughters. *Mars* est admodum calidus, &c. *Mars* is very hot, and produceth more vehement Effects of Heat, than the inferior Planets. *Influentia autem eius precipua, & principalis, saltem in nostro climate, consistit in aptitudine ad producendum violentas tempestates & pluvias.* Their Influences (at least in our Climate) principally consist in producing violent Tempests and Rains, especially

Astro'logical Observations, 1697.

especially in that Part of the Zodiack noted for turbulent, by reason of the yelping rising of the *Virgin's Spike*. At the Beginning of *April* there is an Opposition of the Sun, *Jupiter* and *Mars*, which probably may affect the Air, with Turbulence, Wind and Thunder, tho early in the Year. Probably there may be some Misunderstanding between some great Men; and some under Suspicion of Infidelity or unfair and treacherous Dealing with the Government. The next is a Quartile of the Sun and *Saturn*, and shews such Effects, as are becoming a grumbling, murmuring, and discontented People. Whilst all things are carryed on at the Helm with the greatest Privacy, and no less Severity. The Quartile of h *Saturn*, *Mars* and *Mercury* cannot be past by without Consideration; it inclines the Air to Winds and Clouds, and gives us a turbulent Season. It signifieth many notorious and publick Thefts and Robberies, notable Cheats, *falsa Coiners*, libelling and abusing the Government by scandalous Invectives; endeavouring to poison the Minds of Men, into Disloyalty and Rebellion; let them that use such Practices beware, lest they go in Pilgrimage to *St. Tyburn*. These are the most material Configurations of this Quarter: All the Aspects of the Month of *May* are amicable, and seem to incline the Air to a seasonable State and habit.

Of the Summer Quarter.

NOW the Sun, the glorious Lamp of Heaven, the great Light and Life of the World, who by his eternal Race, differeth the Times and Seasons; is now arrived to his vertical Point, the Summer Solstice, making the longest Day and shortest Night, so all on this side the Equator. It happeneth this Year on *Thursday* the sixth of *June*, at 19 Minutes past nine of the Clock in the Evening. The Face of Heaven as followeth.

The Mid-heaven 22 Degrees 11 Minutes 47
 The Ascendant 16 Degrees 48 Minutes 45
Jupiter is in the 8th House barely turn'd to be direct. The Moon and *Mercury* setting in the West Angle. All the rest of the Planets are under the Earth; *Saturn* intercepted in the East Angle.

Astrological Observations, 1697.

Angle. On the 12th Day there is a Conjunction of the Sun and Venus, between the 1st. and 2d. Degree of Cancer, *Dies calidi ob Tropicam altitudinem.* This is the general Rule, but after faith, *Sed tamen secundus hujus Dodecatemorii gradus videtur esse per se frigidioris aliquantum naturæ, cum non semel expertus sim frigus subitum & acre, dies mediam Æstatem subsequentes invasisse.* Yet nevertheless the Second Degree of this Sign, doth seem by it self for some time to be of a colder Nature: When many times we have experienced sudden and sharp Cold to have invaded us in the midst of Summer. I shall not absolutely predict it to be so this Year; But we may justly expect sudden and brisk Showers, with fine Scenes of Clouds fleeced, striped, or streaked, lying as it were in Furrows. These Effects last not long, because the Retrogradation of Venus, cause a more sudden Separation than if they went (as it were) Hand in Hand by (almost) an equal Motion. At the Middle of July there is an Opposition of the Sun and Saturn, the Effects whereof probably may give some Disturbance or impediment to the Affairs of some Prince or Potentate, from some of the long Robe, both Clergy Men and Lawyers: *Sed meliora spero in our Nation,* being not long since under the same, or the like Misfortunes or Troubles, and some few of the Authors of it, received their just Rewards from our just Laws, and the most merciful of Princes.

In the Air this Opposition stirreth up dense Clouds, *Aerem frequenter reddit nubilem & turbidum; consensunt tota Astrologorum familia, qui horrendum aliquid semper a Saturno expectare solent.* He always renders the Air cloudy and turbulent, the whole Family of Astrologers agree, who always are wont to expect somewhat to be dreaded from Saturn's Influence. And I fear that somewhat of the vulgar Prediction of St. Swithin will be verified this Year, but not to the large Extent of that Notion. The Opposition of Saturn concludes the Quarter, being celebrated about the 25th of August. It stirs up Tumults, Divisions, Discord, and many Mischiefs among the common People: Let Italy, Muscovia, Tartary, and some Parts of Turkey the Story tell, I hope no such things are here. Perhaps the Raparees in Ireland may start out upon some mischievous Design, and give some Trouble to some Part of that Kingdom. They

produce

Astrological Observations, 1697.

produce some Thunder, windy and turbulent Weather, perhaps give the former some leasurely Trouble.

Of the Autumnal Quarter.

THIS Quarter begins with the *Sun's* Entrance into the Equinoctial Sign *Libra*, or second Equinox: The Earth being at right Angles with the Sun, and receiveth an equal Portion of Light and Darkness. It happeneth this Year on the 14th. of September, at 23. Hours and 52. Minutes past Noon, that is on Sunday the 12th. of September, 8. Minutes before Noon, the Face of Heaven as followeth.

The { Mid-heaven 27 Degrees 49 Minutes }
Ascendant 1 Degree 52 Minutes }

All the Planets are above the Earth but the Moon and Saturn. The Moon in the Ascendant, Saturn in the second; the Sun and Mercury in the Mid-heaven, Jupiter in the 11th. Mars and Venus on the Cusp of the 8th. in Conjunction, separating, but slowly, their Motion not much differing. Eicladius observeth, *sæpe per continuos aliquot dies durare, cum planete sint circius propemodum equalis, the Effects of their Conjunction do often last for many Days, when both their Motions are near alike*, as here they are; Winds and Showers often attend the Aspect. In this Month of September happeneth a quartile Aspect of Saturn and Jupiter, it is a great Aspect, we may call it *Tresgrand*. It signifieth Insurrections, Rebellion, great Plots, and malicious Contrivances against Kings, Governours, and Potentates; many malicious Contrivances, set on work by their own Counsellors and Confidants: Great Changes in the Law, and in Court Affairs, placing and displacing of many in several Capacities. This is the first Quartile, and somewhat remote from the Degree of the triple Conjunction: But there is two more Quartiles in the next Year 1698, the one in May, the other in July, of which this is the *Prodromus*, and prepareth Matter for the other two. Mercury is in Conjunction with Jupiter, and in Quartile to Saturn, and near the Place he was in at the first of the triple Conjunctions, in a Square to his Place at the second, and in Opposition to his Place at the third Conjunction.

Many

Astrological Observations, 1697.

Many Doubts, Fears, and Jealousies among the Grantees of the World. Close Consultations, and great Matters political are under Consideration; many false Rumors among the People, and many villanous Libels spread abroad to poison the Minds of the unwary. - The Aspects of the Superiors do often cause great Disturbances in the Earth, Air, and Water, by Earth-quakes, strange Meteors, and horrible Winds, and sometimes in some Places, Inundations, though for the most part the Superiors do favour Drouth. The Quartile of the Sun and Saturn in October, deserves Consideration; the Sun taking the Place of Jupiter, and strengthens the foregoing Observations, and adds a fresh Ferment to the Malecontents and mutinous Humour, &c. Spreads dark and thick Clouds over the Skye, fills them with Moisture, hence we may expect cold Rain and dark Weather.

Of the Eclipses this Year 1697.

THERE will happen this Year three Eclipses of the Luminaries, one of the Sun, and two of the Moon, there will be but one visible unto us, viz. one of the Moon.

The first will be an invisible Eclipse of the Sun, on April the 15th. betwixt 12. and 1. in the Morning.

The second will be a Lunar Eclipse on April the 26th. about 9. in the Morning, not visible to us, the Moon being under the Earth.

The third will be a visible Eclipse of the Moon on the 19th. of October, the Calculation followeth.

D.H.M.

At the Middle of the Eclipse the Heavens appear thus,

The { Mid-heaven 0 Degrees 48 Minutes }
 { Ascendant 5 Degrees 25 Minutes }

The Eclipsed Luminary is in the eleventh House and ☿ Sa-
 turn in the 8th. in Square to both the Luminaries, which ag-
 gravates the Effects, which seems most to befall to Cattle. Pro-
 clus saith, in *Dentio primo* ☿, *hinc morboq; grassatur in pecudes*,
 an Eclipse in the first ten Degrees of Taurus, it presageth Death, or
 some epidemical Diseases among Cattle, probably this principally
 to befall *Wiltshire*, some Prejudice to the early Fruits of the
 Earth the next Spring; the Places mostly subject to the influ-
 ence are those under Taurus, Scorpio, Leo and Aquarius, it will
 be too tedious and not material to insert them here.

Astrological Observations, 1697.

A Table of the Hour and Minute of the seven Stars coming to the South, every 5th. Day of the Year. Days of the Month.

1		6		11		16		21		26		Months.
H.	M.	H.	M.	H.	M.	H.	M.	H.	M.	H.	M.	
7	A 53	7	A 36	7	A 14	5	A 53	6	A 32	6	12	January.

0	15	1	54	1	34	1	14	10	53	10	33	May.
10	M 9	9	47	9	26	9	68	4	58	2	23	June.
8	57	4	57	2	47	4	6	4	56	2	25	July.
6	35	4	55	2	65	8	4	4	94	3	1	Aug.
4	93	3	52	3	35	3	173	0	2	4	1	September.
2	20	2	31	4	41	2	51	5	0	4	6	October.
0	20	0	31	1	39	1	16	10	A 54	10	32	November.
10	A 12	9	A 49	9	62	9	A 48	4	18	A 20	20	December.

Seek the Month under the Title Months, and on the Head the Day of the Month, and in the Angle of meeting, you have the Hour and Minute of the seven Stars Southing. For example, *January 16.* they come to the South at 53. Minutes past 6. On the first of *February* at 46. Minutes past 5.

To find the Time of their rising, subtract 8. Hours 16. Minutes from the Time of their southing, and the Remainder is the Time of their rising; but if you add 8. Hours and 16. Minutes to the Time of their southing, the Sum is the Time of their setting. If your Substraction cannot be made because the Hours and Minutes be, sometimes less than 8. Hours 16. Minutes, you must add 12. thereto. If in the Addition your Number exceed 12. you must subtract 12.

The Table following sheweth the southing, of some other of the fixed Stars, after the 7. Stars, with their semidiurnal Arch.

Astrological Observations, 1697.

The Names of the Stars.	Time of souching.		Semidiur- nal Arch.	
	H.	M.	H.	M.
The middle Star of Orion's Belt	1	52	5	14
Aldebaran, South Eye of the Bull	0	50	7	27
Syrin, the great Dog-star	3	3	4	30
Procion, the lesser Dog-star	3	54	5	32
The Head of Hydra	5	44	6	38
Cor Leonis, the Lions Heart	6	27	7	14
Spica virginis, the Virgin's Spike	9	40	5	11
Arcturus	10	33	8	42
South Ballance	11	5	4	40
North Ballance.	11	32	5	17

To know when the great Dog star comes to the South on the 16th. of November, I look into the former Table, and find that the seven Stars come to the South at 11. Hours 16. Minutes after Noon, I look into the Column of this Table entitled Time of souching, and against the great Dog-star I find 3. Hours 3. Minutes, which added to 11. Hours 16. Minutes, makes 14. Hours 19. Minutes, deducting 12. the Dog-star comes to the South at 19. Minutes past 2. in the Morning. Now to know the Time of the Dog-star's rising, I find the Semidiurnal Arch in the last Column, is 4. Hours 30. Minutes, which subtracted from the Time of their souching, by adding 12. to the souching, and the Remainder is 9. Hours 49. Minutes at Night, when the great Dog star rises; and adding 4. Hours 30. Minutes to the Time of its souching, and that gives you 6. Hours 49. Minutes, which is the Time of the setting of that Star. I hope these Rules will easily be apprehended.

Stop here my Pen, it's time to make an end,
 And bid a Farewel to my country Friend.
 If true, our Globe of Strife unsteady be,
 Of the same Humour we her Dwellers see:
 Heavens constant various Mutations do show,
 Th' Uncertainty that's certain here below.
 My Pamphlet various Entertainment finds:
 Th' Inconstancy that's constant in Mens Minds
 Now Praise her Portion is, Dispraise by and by;
 There's nothing constant but Inconstancy.
 But yet my Muse, unto thy Reader still
 Shew thou the Constancy of thy good Will

August 18,
 1666.
